## 1. PURPOSE

The purpose of this Technical Memorandum (TM) is to summarize the completion of the surface water sampling task as described in the approved *Kingston Ash Recovery Project Non-Time-Critical Removal Action for the River System Sampling and Analysis Plan* (SAP), Rev. 3, May 24, 2010, Document No. EPA-AO-021. This TM is one of a series being prepared to summarize the field work and data collection activities as SAP tasks are completed. The TM series is intended to provide interim presentations of data that are the bases for the nature and extent of contamination section of the River System Engineering Evaluation/Cost Analysis (EE/CA) Report. No data evaluation or conclusions are presented.

## 2. BACKGROUND

The Data Quality Objective (DQO) problem statement for surface water sampling is:

Ash/sediment contains naturally-occurring metals (e.g., arsenic, selenium) and radionuclides (e.g., radium 226, thorium 228). Sediment may also contain legacy constituents (e.g., polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), pesticides, mercury, cesium 137, chromium) from other sources. These constituents may dissolve or become suspended in surface water within the river system where exposure by humans or ecological receptors (benthos, fish, birds, mammals, reptiles, and amphibians) may occur. Conditions occurring after the dredging has been completed may be different than those observed during the ongoing dredging operations. Therefore, the focus of this sampling event was surface water following completion of dredging.

Section 2.2.5 of the SAP presents the design of the surface water sampling study. People may be exposed to surface water if they use the river system for recreation or as an untreated drinking water source. Aquatic biota are directly exposed to surface water, and birds and mammals that inhabit or forage in the river system may be exposed to surface water in their diet. In an effort to estimate the potential intake of ash-related constituents in the surface water by human or ecological receptors, sampling of those constituents was needed to determine those concentrations.

Samples of surface water were collected at fixed station monitoring locations in the Emory, Clinch, and Tennessee Rivers. TVA had established 10 fixed stations that were monitored during the time-critical removal action. These locations were adjusted to correlate with approximate locations of submerged sediment samples and with historical TVA fish health and bioaccumulation studies and to provide representative measurement of water quality evenly distributed across the study area. An additional sample location was added at Emory River Mile (ERM) 0.3 at the request of the On-Scene Coordinator for the time-critical removal action.

Surface water samples were collected at two discrete depth intervals using a peristaltic pump. One sample was collected at each location at mid-depth for use in evaluating human, pelagic fish, and wildlife exposures. The second sample was collected approximately one-half meter (1.5 feet) above the bottom for use in evaluating epibenthic water for bottom-dwelling organisms. When thermal stratification of the water column was detected (see Field Guide for Determination of Thermal Stratification), samples were collected at mid-depth in the epilimnion, mid-depth in the hypolimnion, and at the epibenthic depth. The 11 fixed station monitoring locations were sampled once each week for 8 weeks to obtain sufficient quantity of data to demonstrate variability. A total of 296 samples were collected.

### 3. SAMPLING AND ANALYSIS ACTIVITIES

Samples of surface water were collected at 11 fixed station monitoring locations in the Emory, Clinch and Tennessee Rivers (Figure 1). Three upstream reference locations were sampled (ERM 8.0, Clinch River Mile [CRM] 6.0, and Tennessee River Mile [TRM] 568.5). Within the Emory River, five locations (ERM 0.3, ERM 1.0, ERM 2.0, ERM 3.0, and ERM 4.0) were sampled. Two locations within the Clinch River (CRM 2.0 and CRM 3.5), and one location within the Tennessee River, TRM 566.0, were sampled.

Surface water sampling began on August 31, 2010 and concluded on October 21, 2010. Water-quality parameters (temperature, milligrams per liter dissolved oxygen, percent saturation dissolved oxygen, specific conductance, turbidity, pH, and oxidation-reduction potential) were measured in the field at each sampling location using a standardized HACH® Hydrolab® DS5x (TVA-KIF-SOP-01, TVA-KIF-SOP-14).

Samples were collected using a MP-V400 Rola Tec peristaltic pump, new dedicated tubing, and dedicated PVC weights. The dedicated tubing was used for no more than 32 days before being replaced with new dedicated tubing.

Surface water samples were analyzed for the following constituents: total and dissolved metals, hardness as calcium carbonate, total suspended solids (TSS), total dissolved solids (TDS), dissolved organic carbon (DOC). Twenty-five percent of the surface water samples were randomly selected to also include the following analysis: radionuclides (potassium-40, radium-226/228, isotopic thorium, isotopic uranium, cesium-137, cobalt-60), and speciation of dissolved metals (inorganic arsenic, organic arsenic, arsenic III, arsenic V, inorganic selenium, organic selenium, selenium IV, and selenium VI).

Samples were analyzed by Test America-Nashville for metals (total and dissolved), TSS, TDS, DOC, and hardness as calcium carbonate. Radionuclides (potassium-40, radium-226/228, isotopic thorium, isotopic uranium, cesium-137, cobalt-60) samples were analyzed by GEL Laboratories, LLC. All metals speciation samples were analyzed by Frontier Global Services (formerly Frontier GeoSciences).

Sampling and analysis were performed in accordance with the *Quality Assurance Project Plan for the Tennessee Valley Authority Kingston Ash Recovery Project (QAPP)* (TVA-KIF-QAPP), the listed SOPs, field guides, and Work Package WP-1045 Table 1 identifies the applicable TVA Documents and SOPs associated with this surface water sampling event. Field duplicates, equipment blanks, matrix spikes, and matrix spike duplicates were all collected at 1/20 frequency (5%). Duplicate field measurements (turbidity, temperature, dissolved oxygen, specific conductance, oxygen reduction potential, and pH) were not collected.

#### 4. SUMMARY OF CHANGES

Field Change Notices (FCNs) were prepared to document deviations from the SAP. FCNs were prepared and approved for the addition of strontium analysis and the elimination of chromium and mercury speciation analysis.

In order to support ongoing ecological studies at the ash recovery project, strontium was added to the SAP's list of requested metals analyzed in all sample media, including surface water. Strontium is an element found in ash that is also strongly associated with calcium metabolism. As such, strontium is an indicator of potential exposure of organisms to ash. Samples of abiotic media will be analyzed for strontium to evaluate potential sources of any observed uptake in organisms. This addition did not increase analytical costs. The data for strontium is already generated in the lab analyses, but until now those results have not been extracted from the instrument signals (FCN-011).

The SAP specifies that chromium VI and mercury speciation would be attained from 25% of the surface water samples collected. FCN-013 documents the elimination of both chromium VI and mercury speciation from surface water sample analysis

Mercury speciation was determined to be unnecessary for surface water collected in the river system because mercury and methylmercury were infrequently detected in the surface water samples from time-critical sampling activities. Mercury in the water column bonds strongly to silts and organic matter, which settle out and accumulate in sediments, therefore sediment samples collected under the SAP will still include 25% speciation of mercury. Methylmercury biomagnifies in aquatic food webs making it easy to detect in fish tissues. Fish samples collected for Kingston Ash Recovery Project will continue to be analyzed for mercury (FCN-013).

Chromium speciation analysis of surface water samples was also eliminated based on water sampling results from time-critical sampling activities and the nature of chromium VI. Speciation of chromium was intended to quantify potential exposures to hexavalent chromium (chromium VI). Chromium VI was identified as a contaminant of concern in the Department of Energy's Remedial Investigation and Record of Decision for the Clinch River/Poplar Creek Operable Unit based on a conservative assumption that chromium detected in abiotic media was the more toxic chromium VI. However, only analysis for total chromium had been performed. Chromium VI is more toxic than trivalent chromium (chromium III). Chromium VI is a strong oxidizing agent and readily reduces to form chromium III. Standards for metals in surface water are based on dissolved concentrations, which is the bioavailable fraction for aquatic biota. All of the detections of dissolved chromium in surface water were below the Ambient Water Quality Criterion for both chromium III and chromium VI (FCN-013).

## 5. ANALYTICAL DATA REVIEW

TVA's contract laboratories were required to submit three types of deliverables: a limited (Level 1) data package containing sample results and batch quality control (QC) sample results; a fully-documented (Level 4) data package including raw data for all analyses; and electronic data deliverables (EDDs) for storage in TVA's EarthSoft EQuIS® database.

EDDs were subjected to completeness and correctness testing during loading to TVA's EQuIS database; once loaded to the EQuIS database, the data were subjected to verification. As defined in the TVA-KIF-QAPP, data verification involved comparison of the data loaded in the EQuIS database to the results reported in the Level 1 data package. In addition, data verification included review of the batch QC summary forms for compliance with the applicable methods and for data usability with respect to the project DQOs and the TVA-KIF-QAPP.

Following receipt of the Level 4 data package, data were subjected to validation. As defined in the TVA-KIF-QAPP, data validation included review of raw data and associated QC summary forms for compliance with the applicable methods and for data usability with respect to the appropriate guidance documents. As stated in the QAPP: "Initially, 100% of the chemical analysis data will be reported in full documentation data packages for independent data validation. Depending on the nature and frequency of issues identified during data validation, the percentage of data undergoing full data validation may be reduced to a lesser percentage (such as 20%) or data verification may be substituted. The reduction in full data validation may be matrix specific, laboratory specific, or analyte specific. If after the percentage of full data validation has decreased, a trend in frequency of reporting issues, method non-compliances, or data usability issues is identified, data validation will be conducted for specific data points or the percentage of full data validation percentage may be increased until the issues have been minimized to their initial frequency." Data validation expands upon the completeness, correctness, and usability assessment performed during verification to include evaluation of instrumental QC analyses, review of sample preparation information, and recalculation of reported results from raw data.

TestAmerica Nashville has analyzed surface water samples for TVA since March 2009; surface water data from TestAmerica Nashville is considered to be a mature data stream. A mature data stream will primarily undergo verification. Frontier and GEL are new to the project having been contracted during 2010; therefore, 100% of data generated from Frontier and GEL were validated. Table 2 summarizes the data from the three laboratories.

**Table 2. Data Review Summary**

Laboratory	Number of COCs	Number of Normal and Field Duplicate Samples by Lab	Number of Equipment Blanks by Lab	Number of Analytical Results	Percentage Final-Verified	Percentage Validated
TestAmerica Nashville	11	198	8	11,550	91%	9%
Frontier	3	48	2	500	0%	100%
GEL	5	50	2	936	0%	100%
<b>Total Count</b>	<b>19</b>	<b>207*</b>	<b>8*</b>	<b>12,986</b>	-	-

**Note:**

\*"Total Count" for normal, field duplicate and equipment blank samples is the number of discrete samples sent to each lab. Each sample requiring metals speciation (Frontier) and/or radiological (GEL) analyses in addition to metals analysis (TAN) was split, with each split counted in this table as one sample per receiving lab ("Number of Samples by Lab").

## 6. DATA QUALITY SUMMARY

Data verification and/or validation was performed based on the sample results, summary QC data, and raw data provided by the laboratory. Data verification and validation includes a review of the following QC measures (where applicable):

- Sample condition upon laboratory receipt;
- Initial calibration linearity (data validation only);
- Field and equipment blank analysis results greater than the method detection limit (MDL);
- Blank analysis results greater than the MDL (data validation only);
- Sample preparation and holding times;
- Initial calibration verification/continuing calibration verification (ICV/CCV) standard recoveries (data validation only);
- Inductively coupled plasma (ICP) interference check standard results (data validation only);
- MDLs and linear ranges (data validation only);
- Internal standard recoveries (data validation only);
- Matrix spike/matrix spike duplicate (MSMSD);
- Laboratory and field duplicate precision;
- Quantitation of positive results (data validation only);
- Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) recoveries and precision;
- Total vs. dissolved sample precision;
- Analytical sequence (data validation only);
- Reporting limit (RL) standard recoveries (data validation only); and
- MDL verification standards (data validation only).

The data met the DQOs defined for this task and are acceptable for use. Table 3 summarizes the data quality based on the review performed and as compared to the data quality measures identified in the TVA-KIF-QAPP. The text of the data validation reports for the samples included in this TM will be included in the EE/CA Report.

**Table 3. Summary of Surface Water Data Quality**

Laboratory	Analytical Results (Total Count)	Acceptable (No Qualification) <sup>a</sup>		Acceptable (Estimated) <sup>b</sup>		Blank Qualified <sup>c</sup>		Rejected <sup>d</sup>	
TestAmerica Nashville	11,661	9,141	78%	2,397	21%	121	1%	2	<1% <sup>e</sup>
Frontier	500	339	68%	161	32%	0	0%	0	0%
GEL	936	914	98%	0	0%	22	2%	0	0%

**Notes:**

<sup>a</sup>Acceptable, No Qualification – Qualification of data was not warranted based on a review of the applicable QC measures.

<sup>b</sup>Acceptable, Estimated – Quantitation or detection limit is approximate due to limitations or bias identified during a review of the applicable QC measures.

<sup>c</sup>Blank Qualified – Result is considered “not-detected” because it was detected in an associated blank at a similar level.

<sup>d</sup>Rejected – Unreliable result or detection limit; analyte may or may not be present in sample.

<sup>e</sup>Rejected results were due to dissolved metals results that were significantly greater than the associated total metals results. Therefore, both results were rejected.

## 7. DATA SUMMARY

Summary statistics are provided in Tables 4 through 9 for each river segregated by mid-depth and epibenthic samples.

**Table 4. Summary Statistics for Emory River Mid-depth and Epilimnion Surface Water Samples**

Selenite	mg/L	0.285 / 0.285	ND	ND	NA	NA	0 / 4	NA
Inorganic Selenium, Dissolved	mg/L	0.285 / 0.285	0.00033	0.00033	TRM568.5	10/12/2010	1 / 4	0.000327
Organic Selenium, Dissolved	mg/L	0.388 / 0.388	0.00045	0.00045	TRM568.5	10/12/2010	1 / 4	0.000449
Silver, Dissolved	mg/L	0.00033 / 0.00033	ND	ND	NA	NA	0 / 20	NA
Silver, Total	mg/L	0.00033 / 0.00033	ND	ND	NA	NA	0 / 20	NA
Sodium, Dissolved	mg/L	NA	6.17	8.31	TRM568.5	10/05/2010	20 / 20	6.862
Sodium, Total	mg/L	NA	6.29	8.38	TRM568.5	10/05/2010	20 / 20	6.938
Strontium, Dissolved	mg/L	NA	0.0735	0.114	TRM568.5	10/12/2010	20 / 20	0.1004
Strontium, Total	mg/L	NA	0.0746	0.117	TRM568.5	10/12/2010	20 / 20	0.1027
Thallium, Dissolved	mg/L	0.0005 / 0.0005	ND	ND	NA	NA	0 / 20	NA

**Table 9. Summary Statistics for Tennessee River Epibenthic and Hypolymnion Surface Water Samples**  
(continued)

Analyte	Units	Detection Limit Range	Minimum Detected Result	Maximum Detected Result	Location of Maximum Detected Result	Date of Maximum Detected Result	Number of Detections / Samples	Mean of Detections
Thallium, Total	mg/L	0.0005 / 0.0005	ND	ND	NA	NA	0 / 20	NA
Total Dissolved Solids	mg/L	NA	93	167	TRM568.5	10/12/2010	20 / 20	144
Total Suspended Solids	mg/L	NA	5.8	21.3	TRM566.0	10/19/2010	20 / 20	13.17
Vanadium, Dissolved	mg/L	0.001 / 0.001	0.001	0.00111	TRM568.5	09/29/2010	2 / 20	0.001055
Vanadium, Total	mg/L	0.001 / 0.001	0.001	0.00223	TRM566.0	09/08/2010	15 / 20	0.00149
Zinc, Dissolved	mg/L	0.0083 / 0.0083	ND	ND	NA	NA	0 / 20	NA
Zinc, Total	mg/L	0.0083 / 0.0083	ND	ND	NA	NA	0 / 20	NA
Actinium-228	pCi/L	10.5 / 15.5	ND	ND	NA	NA	0 / 5	NA
Americium-241	pCi/L	4.28 / 24.1	ND	ND	NA	NA	0 / 5	NA
Bismuth-214	pCi/L	6.19 / 10.7	ND	ND	NA	NA	0 / 5	NA
Cesium-137	pCi/L	2.73 / 4.27	ND	ND	NA	NA	0 / 5	NA
Cobalt-60	pCi/L	2.3 / 3.86	ND	ND	NA	NA	0 / 5	NA
Lead-212	pCi/L	4.79 / 8.54	ND	ND	NA	NA	0 / 5	NA
Lead-214	pCi/L	5.4 / 20.7	ND	ND	NA	NA	0 / 5	NA
Potassium-40	pCi/L	35.6 / 50.4	ND	ND	NA	NA	0 / 5	NA
Radium-226	pCi/L	0.464 / 0.606	ND	ND	NA	NA	0 / 5	NA
Radium-228	pCi/L	0.384 / 0.992	ND	ND	NA	NA	0 / 5	NA
Thallium-208	pCi/L	2.91 / 4.7	ND	ND	NA	NA	0 / 5	NA
Thorium-228	pCi/L	0.0728 / 0.149	ND	ND	NA	NA	0 / 5	NA
Thorium-230	pCi/L	0.0574 / 0.163	ND	ND	NA	NA	0 / 5	NA
Thorium-232	pCi/L	0.0528 / 0.147	ND	ND	NA	NA	0 / 5	NA
Thorium-234	pCi/L	61.3 / 245	ND	ND	NA	NA	0 / 5	NA
Uranium-234	pCi/L	0.0952 / 0.252	0.159	0.297	TRM568.5	09/29/2010	3 / 5	0.2183
Uranium-235	pCi/L	0.0736 / 0.269	ND	ND	NA	NA	0 / 5	NA
Uranium-238	pCi/L	0.0596 / 0.218	ND	ND	NA	NA	0 / 5	NA
