

Time-Critical Concurrence

Area:

Emory River, Segment "East of Dike 2", Grids 36A1 and 36B1

Agreement:

Ash removal activities have been completed in Segment "East of Dike 2", Grids 36A1 through 36B1. The approach to dredging as well as developing the pre-spill surface is documented in KIF-10-052.

These grids were located adjacent to the berm separating the Emory River from the Swan Pond embayment. Ash removal was performed by the Addison 14" dredge on June 19th and by the Shirley on June 17th. Bathymetric survey indicates that the grids have been excavated to the pre-spill surface.
