DESCRIPTION OF MATERIAL

SURFACE ELEVATION +764.42 (Continued)

Silty medium to coarse sand, little gravel, trace clay - brown and gray - medium dense - wet (SM)

Below 39 ft. water from granular layers dilute drilling fluid.

44.0

Silty fine to coarse sand, little fine to medium gravel, trace clay - gray - medium dense to dense - moist to wet (SM)

Sample 20A: Weathered shale noted

49.0

Weathered shale - gray

50.5

Conasauga Shale. Greenish to greenish gray shaly limestone. Moderately weathered, soft to moderately hard, thinly bedded. Most of core is shattered.

Run Depth Recovery RQD Fracture

# (ft.) (%) (%) Frequ.

1 50.5 - 51.0 100\* 0 Undetermined

\*May not be representative because much of the core is broken

Conasauga Shale. Dark green to brown shale. Moderately weathered to fresh, soft, fissile, laminated to thinly bedded. Bedding approx. 20° from horizontal.

Run Depth Recovery RQD Fracture

# (ft.) (%) (%) Frequ.

2 51.0 - 53.4 100\* 0 Undetermined

\*May not be representative because much of the core is broken

Conasauga Shale. Dark green to grayish green to gray shaly limestone. Moderately weathered, with more weathering along fracture, soft (shale) to moderately hard (limestone fragments in shaly matrix). Bedding approx. 30° from horizontal.

Run Depth Recovery RQD Fracture

# (ft.) (%) (%) Frequ.

3 53.4 - 60.5 40.8\* 0 Undetermined

\*May not be representative because much of the core is broken

End of Boring

Borehole advanced to 12.0 ft. with power auger.

Borehole advanced from 12.0 to 50.5 ft. with rock bit and drilling fluid.

Borehole advanced from 50.5 to 60.5 ft. with diamond coring bit and drilling fluid.

Borehole grouted upon completion.

Casing used: 10 ft. of 4 in. and 50 ft. of 3 in.

				Disturbed samples retrieved following completion of vane shear testing						
45.0		RB		Sample 4: No sample recovery with Shelby tube. Obtained sample with 3-inch split-spoon. Sample 5: No sample recovery with Shelby tube or 3-inch split-spoon after several attempts.						
50.0	1	ST		Silty clay, little fine to medium sand - brown and gray - medium (CL) Vane Shear Test #1 at 50.5 ft. Peak Su = 925 psf, Remolded Su = 450 psf						
	2	ST		Clayey silt, little fine to medium sand - gray - medium - moist (CL-ML) Vane Shear Test #2 at 52.5 ft. Peak Su = 550 psf, Remolded Su = 100 psf						
55.0	3	ST		Silty clay, little fine to medium sand - reddish brown - stiff (CL) Vane Shear Test #3 at 54.5 ft. Peak Su = 1025 psf, Remolded Su = 75 psf						
	4	SS+		Silty clay and fine to medium sand - brown - very stiff (CL) Vane Shear Test #4 at 56.5 ft. Peak Su >1975 psf						
59.5	5	SS+		Sample 5: No recovery. Vane Shear Test #5 at 58.0 ft. Peak Su = 2825 psf, Remolded Su = 2075 psf						
				End of Boring Borehole advanced from 7.0 ft. with power auger. Borehole advanced from 7.0 to 57.5 ft. with rock bit and drilling fluid. Casing used: 10 ft. of 4 in. SS+ = 3 in. Split spoon						

The stratification lines represent the approximate boundary lines between soil types: in situ, the transition may be gradual.

						10	20	30	40	50

45.0		RB																		
50.0																				
55.0	RUN 1	DB		50.0	Conasauga Shale. 0.2 ft. gray limestone layer at top over dark greenish gray to brown shale. Moderately to extremely weathered in isolated layers, very soft to soft, finely laminated to thinly bedded with some beds up to 0.2 ft. thick. Below 54.3 ft. core is fragile. Bottom 0.2 ft. appears to be very soft clay. Bedding is approx. 15° from horizontal.															
					Run # 1	Depth (ft.) 50.0 - 57.5	Recovery (%) 69.3	RQD (%) 4.4	Fracture Freq. > 10 / ft.											
60.0	RUN 2	DB		57.5	Driller's note: Significant drill rod vibration during coring. Following Run 1, drilled out hole with rock bit to 57.5 ft. and set 57.5 ft of 3 in. casing.															
					Conasauga Shale. Same description as Run 1. Core heavily broken along bedding planes. Driller estimated 70% water loss.															
65.0					Run # 2	Depth (ft.) 57.5 - 66.0	Recovery (%) 50.0	RQD (%) 0	Fracture Freq. > 10 / ft.*											
70.0	RUN 3	DB		66.0	Conasauga Shale. Same rock as Runs 1 and 2. Very soft, core stuck to barrel - not removable without disturbing layers. Moderately hard layers of shaley limestone at 66.5 to 67.0, 68.0 to 68.2, and 68.7 to 69.2 ft. 1/8 to 1/16" calcite veins crosscut core from 68.7 to 69.2 ft. Driller estimated 100% water loss.															
					Run # 3	Depth (ft.) 66.0 - 71.0	Recovery (%) 50.0	RQD (%) 0	Fracture Freq. > 20 / ft.*											
75.0	RUN 4	DB		71.0	Conasauga Shale. Same general description as Runs 1 through 3 with slightly larger pieces. Zones of fissile shale at 71.3 to 71.4, 72.2 to 72.4, 73.2 - 73.6, and 74.7 to 76.0 ft. and some shaley limestone clasts (rip-up clasts?) in a green to dark green matrix throughout (best examples from 73.6 to 74.7 ft.)															
					Run # 4	Depth (ft.) 71.0 - 79.0	Recovery (%) 56.3	RQD (%) 14.6	Fracture Freq. > 20 / ft.*											
				79.0	... continued

DEPTH(FT) ELEVATION(FT)	SAMPLE NO.	SAMPLE TYPE	SAMPLE DISTANCE	RECOVERY	DESCRIPTION OF MATERIAL	UNIT DRY WT. LBS./FT. <sup>3</sup>
SURFACE ELEVATION +766.13 (Continued)						

80.0	RUN 5	DB			Conasauga Shale. Dark gray top dark grayish-black shale with shaley limestone inclusions (rip-up clasts). Very sticky - disintegrates coming out of core barrel. Fresh to moderately weathered, fewer fissile zones, finely laminated to thinly bedded. Bedding approx. 15° from horizontal.	
85.0	RUN 6	DB			Run Depth Recovery RQD Fracture # (ft.) (%) (%) Freq. 5 79.0 - 83.5 93.0 49.1 > 20 / ft.*	
					Conasauga Shale. Same description as Run 5. Bedding remains approx. 15° from horizontal.	
	RUN 7	DB			Run Depth Recovery RQD Fracture # (ft.) (%) (%) Freq. 6 83.5 - 87.5 75.0 0 > 20 / ft.*	
90.0	R 8	DB			Driller's note: Difficulty advancing split barrel due to blocking of the barrel. Reduced runs to length of 1 - 3 ft.	
	R 9	DB			Conasauga Shale. Core recovered is fissile and shattered.	
	RUN 10	DB			Run Depth Recovery RQD Fracture # (ft.) (%) (%) Freq. 7 87.5 - 90.0 28.0 0 > 20 / ft.*	
95.0					Conasauga Shale. Core badly shattered. Appears similar to Run 7. Bedding still appears to be approx. 15° from horizontal.	
					Run Depth Recovery RQD Fracture # (ft.) (%) (%) Freq. 8 90.0 - 91.0 50.0 0 > 20 / ft.*	
100.0	RUN 11	DB			Conasauga Shale. Same general description of Run 8. Clay seams observed from 91.9 to 92.1 and from 92.3 to 92.4 ft. Bedding remains approx. 15° from horizontal.	
					Run Depth Recovery RQD Fracture # (ft.) (%) (%) Freq. 9 91.0 - 92.5 100 0 > 20 / ft.*	

103.5					Driller's note: Eliminated use of revert derivative and used bentonite slurry as drilling fluid. Blocking of split barrel eliminated or lessened.	
					Conasauga Shale. Darker gray to gray black shale/siltstone with disturbed beds (rip-up clasts) throughout. Fresh, more intact core, less fissile than previous Runs. Clay seams observed from 94.8 to 94.9 ft. Bedding remains approx. 15° from horizontal.	
					Run Depth Recovery RQD Fracture # (ft.) (%) (%) Freq. 10 92.5 - 98.0 100 33.3 3 - 4 / ft.	
					Conasauga Shale. Same general description as Run 10. Fossiliferous, fresh, with scattered thin (< 1/4") layers of black shale, usually as the matrix around rip-up clasts.	
					Run Depth Recovery RQD Fracture # (ft.) (%) (%) Freq. 11 98.0 - 103.5 87.3 18.9 3 - 5 / ft.	

\*Fracture Frequency estimated. Core shattered by drilling.  
End of Boring
